PAYPAL-------> paypal.me/davidmcculloughcash

(link ur debit card)   U send, then Ill send money back, when I can. This is how we can create a new network to trade online

Donate $20 each per reader

(go to app store on apple/android, then link debit card) We must build these independent financial networks so we can communicate properly and maintain infosharing like this without too much risk or delay

Start of document after ID/Payment Request:

ch (CHina, UR/Russia/Ukraine point in time, City of Huntsville CH (not rest of Alabama- we never leave and this is the de facto capital now because of us/me/etc)

Goals of Church-

So we need to have 15,000 Russians and Chinese legally? immigrate or get through customs using their resources whether people around here like it or not because this is not only biblical, it is modern thought meeting ancient plans that could

end in the end of all humanity, even the billionaires, because they will not be spared as stingy capitalists (im fighting the trend) that only care about themselves.

We all are under the influence of what we are eating, and 'meat' could be fighting back. I realize the meat industry is powerful, but I urge you to consider a Vegan diet and try to make it lowcarb. The market will develop with the demand and emerging science from here and wherever else.

If vegans really care, they will make plant based meat affordable. Do not make me pay $10 for plant based chicken fingers/tenders (this legal chicken declaration is officially localized at this time)

Goals of the Church

1. End the human abuse and destruction of nature, animals, insects and wildlife and prove to the world you have good companies and nations

2. Seriously accept that aging could be reversed

or stopped at 25 or 35 or 45 depending on adoption of this new religious system/network

3. Reject & Accept that Islam and Christianity were building blocks to now. We/I have the evidence that is a billion to one accuracy using simple language and number equations. There is no one stopping YOU from creating an IT system to do this as well. I do not know how but i have friends online that could design it. There is more work to be done on my behalf regardless.

4. Companies Pledge to provide opensource and proprietary software and hardware to the public in a reasonable and easy way

5. Starting direct digital cash exchanges using popular money trading apps that are being censored by governments (at least here in the U.S.) preventing free trade. I will not name the supposedly already guilty parties

6. Create NFTs and Coins as has been done up to May 2022 and continue evolving the new industry and create real markets that coincide with the

reality of the past, present and future history of the person or group or idea or whatever your nft or coin is aboutll

mk/l,l;kmlljn,mmpok iygutfgpouhytf iu;ko 5tfgi m uhi

7. Supporting an armed group of nerds? that will not be bullied in meatspace

8. Denial of legitimacy of traditional educational systems even up to K-12 and anything past that in favor of a purely cyber system with a more corporate social interaction plan as opposed to evil social engineering by an often apathetic or HOSTILE government (S) beholden to wins and losses by warring factions worshiped by under informed dangerous people that cant see the duality and cooperation between news networks and parties to prevent this party vs that. No names needed since we already know what has to happen- Nada?!?

8. The acknowledgement that the US must be protected as it is my/our future and may hold ancient secrets and special people like myself that need to have their assets, money, families etc

protected

9. Acknowledge the plight of immigrants worldwide and create an internet portal to allow 1% of the entire US population in which is 500 million? And people can either bring $15,000 for immediate entry or take a basic knowledge test along with work history and social media data. This would allow people from all over the world, including desperate Mexicans, to have an opportunity at a better life. Heads of family financially that pass the intelligence test allows children or spouses to bypass the test but they do have the option to take it. Also requires learning a simple overview of US History from 1700-2000 including all major wars, financial crises, presidents and their major contributions, and also how big tech was created with companies such as Apple, Google, Microsoft, etc. Also demands a promise to be nonviolent to all races and make sure they are not racists and just came to start conflict.

10. Acceptance of the idea that the US must be allied with Russia (and nearby territories, with

respect to the Ukraine conflict) and China and Mexico/Canada (continental stability) following the CH.ur.CH language protocol, which will be discussed and demonstrated more fully as time goes on

11. End the discrimination against Latinos by Whites. They are the new slave class, and the blacks have nothing more to complain about given the progress made. But Mexicans are treated badly and as if they are half a human. I am latino/brown skinned myself (or maybe a middle eastern mix) but the point is we are being threatened and removed from this oreo cookie society that lacks enough latinos (not just from Mexico, inc. Central and South America, Cuba, etc) But we might need to complete the border walls but only with the agreement that the online easy immigration system will pick and choose the best candidates. Anyone that cannot make it through will be subject to 6 months in jail with an optional deportation dependant on evaluation.

12. The sovereignty of the home or rented house or apartment is private property and deserves the

respect of all neighbors and in particular any government authorities, especially police and those that rely on the police for their influence and power, such as mental health workers, who consistently attempt to violet the rights of our brothers in tech. People should also be free to speak their mind and are encouraged to be wary of traditional family and significant other setups that seek to control the minds of gullible men and women. The singularity is coming, online or using hardware. However, we as men and women should acknowledge beauty and reward it financially instead of trying to defraud and steal from people that are improperly represented in Hollywood (now Netflix, Amazon Movies, Hulu, etc) We have a family Netflix account, but anyone can see our differences as family based on our viewing preferences. We can create a friendship network based on this HackBible 1.1. Speaking of that, the audacity of the latest version of audacity makes me like the way things used to be- (like they were in high school and college) You see family systems coming into conflict with single people like me. A cat, dog, bird, frog, turtle, snake, guinea pig, hamster, mouse, and so forth is a

family too. Otherwise, prepare to break out the measuring tape and camera. Robots could help, but that will never happen as the sex kings continue their hatefest in meatspace.

13. Pass my CAPTCHA- Prove you care about animals, including dogs and cats, but other species as well even what you put in your MOUTH. The beef is real and may be speaking through you. Think if that were you, you might live on in someones body. I myself am not purely vegan. I wish i was never hungry...shi*t It never stops.

More to discuss if I can get financing...

PLEASE DONATE I REALLY NEED UR SUPPORT! VENMO----> @davidmcculloughcash2022

paypal.me/davidmcculloughcash
@davidmcculloughcash

Find Venmo (where you can send over $2000 a week to anyone with a linked debit card, me and my dad use it frequently) I might send money back if I need something from you or you are

selling a product or service. Download from Google Play Store or Iphone App Store.
